Title	**T**	**A**	**L**	**ECTS**
Sustainable Biofuel Technologies	2	2	0	6

Language	German					
Level	**Undergraduate**	**X**	**Graduate**		**Postgraduate**	
Department / Program	Energy Science and Technology					
Forms of Teaching and Learning	Face-to-face					
Course Type	**Compulsory**		**Elective**			
Objectives	Within the scope of the sustainable biofuel technologies course, it is aimed to teach the students biofuels and biofuel technologies in detail by conveying the place and importance of biomass among renewable energy sources. In addition, information on sustainability, environmental impact assessment methods, and life cycle assessment is provided. Biomass conversion technologies, various solid, liquid, and gas biofuels, cogeneration, trigeneration, and hybrid power systems are introduced, and it is aimed that the student taking the course will have a basic knowledge of both biofuels and environmental impact assessments with life cycle assessment examples.					
Content	The sustainable biofuel technologies course covers biomass conversion processes; introduction of solid, liquid, and gaseous biofuels, especially biodiesel, bioethanol, biogas, and biohydrogen, applications of cogeneration and trigeneration and hybrid power plants; It includes teaching different thermochemical transformation processes such as combustion, gasification, liquefaction and pyrolysis, and information that will form the basic infrastructure of environmental impact assessment so that all these topics can be handled from the perspective of sustainability management and life cycle assessment.					
Prerequisites	None					
Coordinator	Assist. Prof. Dr. Aslı İşler Kaya					
Lecturer(s)	Assist. Prof. Dr. Aslı İşler Kaya					
Assistant(s)						
Work Placement	None

Final Exam	1	2	2
		Total Work Load	**168**
		ECTS Points (Total Work Load / Hours)	**6**

Learning Outcomes	
1	The ability to have basic knowledge about biomass conversion technologies will be gained.
2	Information will be provided on sustainable production and consumption and life cycle assessment.
3	Basic knowledge about biofuels such as biodiesel, bioethanol, biogas and biohydrogen will be provided.
4	The ability to have basic knowledge about various applications such as cogeneration, trigeneration; hybrid power plants and thermochemical conversion processes will be gained.
5	The ability to interpret biofuels and biofuel technologies in terms of sustainability and life cycle assessment will be gained.

Weekly Content	
1	Presentation of course content. General energy outlook and the place of biomass among renewable energy sources
2	Overview of biofuels and biofuel technologies
3	Sustainability management and biofuels
4	Life cycle assessment and biofuels
5	Biodiesel and sustainable aviation and marine fuels
6	Bioethanol
7	Biogas
8	Midterm
9	Biohydrogen
10	Biohydrogen
11	Thermochemical conversion technologies (Combustion, gasification, liquefaction, pyrolysis)
12	Cogeneration/Trigeneration
13	Hybrid power plants
14	Life cycle assessment case studies
15	Project presentation
16	Finel exam
